

Automated Digital Signage for Small Business

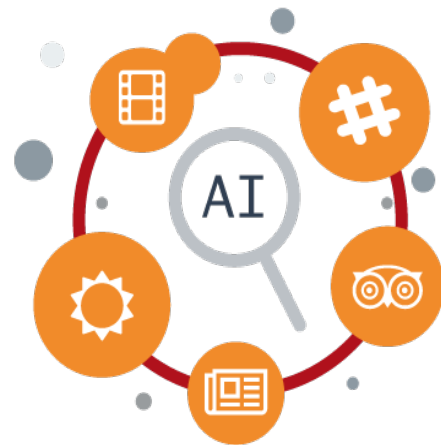

The only Digital Signage Platform based on Artificial Intelligence

No need to create content

Wallin ONE turns any information from the web and social into beautiful content, removing the need to generate or acquire content for Digital Signage.

The platform is built on ever-growing Intelligent Apps like Social Wall, TripAdvisor, News, and so on, giving users a range of available content options not available with other platforms.

Digital Signage Autopilot

Traditional digital signage softwares are based on complex scheduling. Wallin ONE changes that. The only platform built on Artificial Intelligence that puts any screen on Autopilot.

Wallin ONE delivers everything user needs – right out of the box. A machine learning system automatically updates the screen every second, every day, to easily create compelling digital signage experiences.

AUTOPILOT

Automatic setup

Setting up Wallin ONE is quick and magical. Simply select the source of information, like any website or facebook page, and check out the result. In less than 30 seconds, the screen will be ready to play new content like never before.

Ready for any device

No special hardware is required, making Wallin ONE very affordable. You can use any internet device like Smart TV, Google Chromecast, Amazon Fire TV, Google Chromebit, Android TV, Linux, Windows or Mac.

Beautiful content created by Intelligent Apps to give new life to any screen
